

專利/技術名稱	用於改善皮膚老化之組合物 <b>COMPOSITION FOR IMPROVING SKIN AGING</b>		
專利所有權人	中國醫藥大學		
專利國別	中華民國	專利證號	I444197
可利用範圍	提供一種用於改善皮膚老化之組合物，其包含由顆粒白血球刺激因子所誘導生成之周邊單核球細胞。		
摘要	<p>一種用於改善皮膚老化之組合物，其係包含由顆粒白血球刺激因子所誘導生成之周邊單核球細胞，且可用於淡化線紋、減少或預防皺紋減少皮膚變色作用、或改善皮膚色調。</p> <p>A composition for improving skin aging is provided. The composition comprises peripheral monocytes induced by Granulocyte Colony Stimulating Factor (GCSF) and is useful for reducing or preventing wrinkles, reducing discoloration of skin, or improving the appearance of skin.</p> <div data-bbox="582 1182 1313 1680" style="text-align: center;"> <p>The figure consists of four panels labeled A, B, C, and D. Panels A and B are micrographs showing cell morphology. Panel A is labeled '控制組' (Control group) and shows a dense field of cells. Panel B is labeled 'GCSF 注射' (GCSF injection) and shows a sparser field of cells with some larger, more distinct cells. Panels C and D are flow cytometry histograms for '白血球' (Leukocytes). Panel C is for the control group and shows a single peak at approximately 100 fL. Panel D is for the GCSF-injected group and shows a broader peak shifted to the right, around 150 fL, indicating an increase in cell size.</p> </div>
